SUMMARY

Cloud Engineer with an M.S. in Computer Science, building and operating AWS infrastructure in Terraform across development, staging, and production environments. Experienced in multi-AZ VPC design, keyless CI/CD with GitHub OIDC, CloudWatch monitoring and alerting, and least-privilege IAM. Background in secure backend development, vulnerability scanning, and cloud security practices across AWS, Azure, and OCI.

TECHNICAL SKILLS

Cloud: AWS, Microsoft Azure, Oracle Cloud Infrastructure (OCI)
AWS Services: VPC, EC2, S3, IAM, ALB, Auto Scaling, CloudWatch, SNS, DynamoDB, Systems Manager (SSM), EBS, RDS
Networking: VPC design, public/private subnets, multi-AZ architecture, route tables, internet and NAT gateways, security groups, network ACLs, load balancing, health checks, TCP/IP, DNS, routing, NAT, VPN, firewalls
Infrastructure as Code: Terraform, S3 remote state with DynamoDB locking, state versioning and encryption, drift detection
CI/CD & Automation: GitHub Actions, OIDC federation, PR plan gating, approval environments, Git, Python and Bash automation
Security: Least-privilege IAM, trust-policy conditions, SSM Session Manager, encryption at rest and in transit, S3 Public Access Block, CIS AWS Foundations Benchmark, OWASP ZAP, secure code review
Monitoring: CloudWatch dashboards, metric alarms, SNS notifications, log analysis, incident response
Languages & Tools: Python (boto3), Bash, TypeScript, Node.js, pytest, Docker, Linux

PROFESSIONAL EXPERIENCE

Sky Global Solutions LLC **Jul 2026 – Present**
Cloud Engineer *Remote*

- Manage AWS infrastructure as code with Terraform across development, staging, and production environments, using S3 remote state with DynamoDB locking for safe concurrent changes.
- Configure CloudWatch dashboards, metric alarms, and SNS notifications for EC2 and Application Load Balancer resources, triaging alerts for failed health checks and capacity issues.
- Work within a GitHub Actions CI/CD workflow running `terraform plan` on pull requests and gated `apply` on merge, using OIDC keyless AWS authentication in place of long-lived access keys.
- Review IAM policies, S3 encryption and public-access settings, and security group rules across non-production accounts, documenting and remediating misconfigurations.

Tanvi IT Solutions Inc **Sep 2025 – Jun 2026**
Software Engineer Intern *Chantilly, VA*

- Applied cloud security practices across AWS, Azure, and OCI, including IAM access control, security group review, and configuration hardening, remediating 20+ findings mapped to CIS benchmark controls.
- Ran pre-deployment vulnerability scans with OWASP ZAP and performed secure code reviews across 3 internal services, identifying and remediating findings prioritized by severity before release.
- Developed and maintained secure web applications and backend REST services in TypeScript and Node.js, shipping 8+ features across 3 internal services used by project and QA teams.
- Contributed to network anomaly detection, ransomware detection, and secure communication projects, building detection logic in Python and scikit-learn evaluated against a labeled traffic dataset.
- Built and maintained Dockerized lab environments for cybersecurity testing, standardizing setup for repeatable test runs, and wrote Python and Bash automation for deployment, monitoring, and reporting tasks.

Florida Institute of Technology **Sep 2023 – May 2024**
Teaching Assistant, Artificial Intelligence *Melbourne, FL*

- Supported AI coursework on machine learning, neural networks, and algorithm design, authoring Python and TensorFlow example notebooks and leading lab sessions and office hours.
- Evaluated assignments on ML pipelines, classification models, and data preprocessing using Python and scikit-learn, providing technical feedback that improved student model accuracy.

PROJECTS

Highly Available Multi-AZ AWS Network *Terraform, VPC, ALB, EC2, S3, DynamoDB*
github.com/rohanbaba9492/terraform-multi-az-vpc

- Built a multi-AZ network with public and private subnets, NAT egress, an Application Load Balancer, and an Auto

Scaling group of EC2 instances in private subnets, provisioned entirely in Terraform with S3 remote state and DynamoDB locking.
- Removed SSH from the architecture using SSM Session Manager with instance profiles, eliminating the need for a bastion host or key pairs.

Terraform CI/CD with Keyless AWS Authentication *GitHub Actions, OIDC, IAM*
github.com/rohanbaba9492/terraform-cicd-github-actions

- Replaced stored AWS access keys with GitHub OIDC federation, using separate read-only and write IAM roles scoped by branch through trust-policy conditions.
- Automated `terraform plan` on pull requests with output posted as a PR comment and `apply` on merge behind a required-approval gate, plus scheduled drift detection that opens a GitHub issue when deployed infrastructure diverges from committed code.

Automated AWS Security Posture Scanner *Python, boto3, pytest*
github.com/rohanbaba9492/aws-security-auditor

- Developed a read-only CLI tool with 12 checks across S3, EC2, IAM, EBS, and RDS, detecting S3 exposure through all four mechanisms (account and bucket Public Access Block, ACL, bucket policy) with condition-aware policy parsing to suppress false positives.
- Mapped findings to CIS AWS Foundations Benchmark controls with runnable remediation; parallelized across all regions and covered core logic with 25 unit tests.

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals – AZ-900 (2023) · AWS Certified Solutions Architect – Associate (expired 2025) · Aviatrix Certified Engineer – Multicloud Network Associate (expired 2025) · Oracle Cloud Infrastructure Certified Architect Associate (expired 2024)

EDUCATION

Florida Institute of Technology **Aug 2023 – Dec 2025**
M.S., Computer Science *Melbourne, FL*

KL University **Jun 2019 – Apr 2023**
B.Tech., Computer Science *India*
